+234 808-913-2385 ◇ Lagos, Nigeria

ayomideoluwatola@gmail.com ◇ ay10xdev.vercel.app ◇ [Github](#) ◇ [Linkedin](#)

SUMMARY

Software Innovator & Systems Engineer passionate about solving complex technical challenges across the stack. Experienced in building next-gen solutions, from AI-driven B2B automation tools to custom programming languages and decentralized finance (DeFi) protocols.

EDUCATION

Bachelor of Science in Systems Engineering, University of Lagos Oct 2024 - Present
Relevant Coursework: Systems Programming, Data Structures & Algorithms, Blockchain Engineering.

SKILLS

Languages	JavaScript, TypeScript, Golang, Rust, Solidity, Move, English (Advanced)
Frameworks/Tools	MERN Stack, Next.js, React, Sui/Move SDK, MQTT, WebSockets, Git
Specializations	Full-Stack Development, Smart Contract Development, AI Agents, Systems Design

EXPERIENCE

Software Engineer Oct 2024 - Present
Digivo LTD *Remote (Lagos, Nigeria)*

- Architected a B2B SaaS platform integrating autonomous AI Voice Agents and email automation workflows, facilitating client acquisition.
- Engineered scalable backend systems to handle concurrent VoIP sessions and real-time data processing for AI agents.
- Transformed high-fidelity Figma designs into responsive UIs using Next.js and React, focusing on seamless UX.

CoreTech Engineer Intern Jun 2025 - Jan 2026
Freepass Africa *Remote (Lagos, Nigeria)*

- Designed and implemented core M2M infrastructure using MQTT protocols for low-latency data transmission between IoT devices, reducing cloud costs by 20%.
- Developed robust API endpoints for mobile applications, optimizing payload sizes by 60% for low-bandwidth environments.

Smart Contract Developer (Contract) Jun 2025 - Mar 2026
Bizflip *Remote (US)*

- Refactored Solidity codebases to improve gas efficiency by 50% and security, reducing transaction costs for marketplace users.
- Delivered critical secure smart contract features for MVP launch within a strict 2-month deadline.

PROJECTS

AYScript (Custom Language). Built a statically-typed high-level programming language and compiler pipeline from scratch using TypeScript and Golang. Supports variable bindings, complex arithmetic, and native JS interoperability.

Sui-Runner (Blockchain Tool). Developed a high-performance CLI utility in Rust using Tokio to optimize the Move development lifecycle. Includes a hot-reloading engine and transaction dry-run visualizer.

AYSHELL (CLI Environment). Emulated OS-level shell behaviors using Golang, implementing custom process handling and efficient I/O stream management for Unix-based terminal simulation.

HONORS & AWARDS

- **ASES Technical Spotlight Honoree:** Recognized for technical excellence in building AYScript and simplifying complexity in proprietary technologies.
- **ULESite of the Week:** Selected across the Faculty of Engineering for outstanding contributions to software innovation and systems design.

CERTIFICATIONS

- **Harvard CS50X:** Introduction to Computer Science
- **Cyfrin Updraft:** Rust Language and Blockchain Basics
- **IBM Skillsbuild:** Cybersecurity Basics and AI Literacy
